11 June 2019

Developers may wish to enhance the space within the existing Moama North West Masterplan drainage area and Moama Mid-West Drainage Strategy area by showing detailed drawings and calculations for the drainage that meets the following criteria:

- The volume of air space below the proposed major water level of 95.0 AHD must be maintained as shown in this report.

- Minimum batters to be 1:10.

- Must allow for provision for shared recreation path, sufficient Public Open Space requirements as per DCP/MNWMP requirements and the intended multi use of corridor.

- Must meet 1:100 ARI storage requirements at shown in this report.

- Inflows and outflows from the catchment will not be compromised as per intent of this report.
